1. The first part of the paper is devoted to a general
discussion of the problem. It is shown that the
problem is of great importance and that it has
not been completely solved. The author then
presents a new method for solving the problem.
The method is based on the use of the
Fourier transform and the method of
steepest descent. The author shows that the
method is very efficient and that it can be
applied to a wide range of problems.

2. The second part of the paper is devoted to a
detailed discussion of the method. It is shown

The first of these is the fact that the
 system is not a simple one, but a
 complex one, involving many factors
 which are not yet fully understood.
 The second is that the system is not
 a static one, but a dynamic one,
 which is constantly changing and
 evolving. The third is that the
 system is not a closed one, but an
 open one, which is constantly
 interacting with the environment.
 The fourth is that the system is not
 a linear one, but a non-linear one,
 which is characterized by feedback
 loops and other non-linearities.
 The fifth is that the system is not
 a deterministic one, but a stochastic
